ABSTRACT:

A method and apparatus for dynamically storing objects of an object-oriented programming application in a <u>LDAP</u> repository so that useful information from the objects may be read by other applications are disclosed. Embodiments of the method preferably comprise dynamically determining <u>persistent attributes</u>, which are a <u>subset of each object's attributes</u>, for each object being stored and mapping the <u>persistent</u> attributes to <u>LDAP</u> attributes in the <u>LDAP</u> repository. Embodiments of the invention preferably comprise a <u>persistent data manager that is a component of the object-oriented programming application and that acts as an interface to the <u>LDAP</u> repository, storing objects in the <u>LDAP</u> repository when requested. The objects may be Java objects.</u>
